Art Unit: 2126

DETAILED ACTION

1. Claims 1, 3-13, 15-18, and 20-33 are pending. Applicant has amended claims 1, 3, 5, 31, 32; cancelled claims 2, 14, 19 and added claim 33.

Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the first paragraph of 35 U.S.C. 112:
 - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 3. Claims 1, 3-13, 15-18, and 20-32 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Claim 1 recites the limitation "wherein the business object is responsible for the data validating", which was not described in the specification. Applicant cited in the remarks/arguments of the amendment (page 8, line 2) that the subject matter was from the original claim 14, and no new matter is added. However, examiner notes that the original claim 14 was "wherein the business object is responsible for validation of an operation performed in the session", and the specification (section 0019, page 6) cites "In step 26, reading and validating of the data is performed and errors are logged". To Examiner, the above step is carried out by the utility, not the business object. Examiner will interprets the limitation according to the specification for examination purposes.

Correction is required.

Art Unit: 2126

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 1, 3-13, 15-18, and 20-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wess (U.S. 6,163,781) in view of Sprenger (U.S. 6,363,388).

6. **As to claim 1**, Wess teaches

- selecting a file on a local drive or by URL, wherein the file includes a name of an object (Network interface converts the format of data and commands ... textually-based data objects; col. 6, lines 16-29 and lines 53-57, col. 13, lines 3-10),
- uploading the file including the name of the object to a server (data and command from the remote system 116 ... processing system 115; col. 6, lines 16-29 and Fig. 7),
- storing data of the file in a storage of the utility (When a data object instance ... by the functional components 106 and 108; col. 7, lines 38-44),
- performing asynchronous data processing (The comparator compares ... matching variable symbols; col. 8, lines 45-60 and converter 108 processes ... measured value relational table; col. 9, lines 50-57),
- saving and returned a report to the user after the data processing is completed (returning the actual values ... in the remote computer system 116; col. 8, line 60 col. 9, line 13),

Page 3

Art Unit: 2126

- wherein the data processing is performed by reading and validating the data (col. 8, lines 45-60),

Page 4

- and invoking a code in the object (col. 6, lines 30-35).
- However, Wess does not teach starting a session, a business object (wherein the business object do the real work such as performing tasks including adding, deleting or updating the data), storing data in a database of the utility, downloading and saving a report after the data processing is completed, periodically displaying status and wherein the business object is responsible for the data validating. Wess teaches the utility includes database and multiple tables (col. 9, lines 55-57). Sprenger teaches starting a session (col. 19, lines 58-63), a business object (col. 3, line 66 col. 4, line 2, col. 5, lines 1-9, col. 5, lines 52-53, col. 20, lines 423-65) wherein the business object is responsible for the data validating (col. 14, lines 59-65), periodically displaying status (col. 15, liens 25-26 and col. 28, lines 20-42) and user can request and download a report after the data processing is completed (col. 7, lines 27-32).
- 8. It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teaching of Wess and Sprenger because it provides a method to manage data in the database using objects and can support a wide variety of hardware configurations, and easily scale up to meet added demands from the users.
- 9. **As to claim 3**, Wess does not teach the code includes doImport/Export. However, Wess teaches import and export functionalities are provided in the system (col. 12, lines 16-32).

Art Unit: 2126

Sprenger teaches objects provide import/export functionalities (col. 5, lines 45-50). It would have been obvious to one of ordinary skill in the art that software objects provide code and

Page 5

interface so it can be utilized in the application.

10. **As to claim 4**, Wess does not teach the doImport/Export is a command to perform an operation. Sprenger teaches objects provide import/export functionalities (col. 5, lines 45-50), and objects include commands to perform operations (col. 7, lines 1-9). It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teaching of Wess and Sprenger to include the doImport/Export command in the object that

carries out the import/export functionalities.

11. **As to claim 5**, Wess does not teach the code includes an interface to support an export generation. Sprenger teaches the code includes an interface to support an export generation (col. 5, lines 45-50 and col. 18, lines 44-45).

- 12. As to claim 6, Wess as modified teaches the interface includes a code for throwing an attribute set returned by the business object (col. 8, line 60 col. 9, line 13).
- 13. As to claim 7, Wess teaches the utility is designed to process the file on the remote server (col. 6, lines 25-29).

Page 6

Art Unit: 2126

14. As to claim 8, Wess does not teach the business object is written in Java. Sprenger teaches the business object is written in Java (col. 5, lines 52-56).

- 15. **As to claim 9**, Wess does not teach the session is for import and export operations. Sprenger teaches the session is for import and export operation (col. 5, lines 45-50).
- As to claim 10, Wess does not teach the starting of a session includes generating a unique session ID. Sprenger teaches the starting of a session includes generating a unique session ID (col. 14, lines 34-39 and col. 19, lines 35-45).
- 17. **As to claim 11**, Wess teaches the database of the utility includes a plurality of tables (col. 9, lines 55-57).
- As to claim 12, Wess does not explicitly each the plurality of tables include a user name and session ID storing table, a session status storing table, an initial session data storing table, a result storing table, an error message storing table, and a session log storing table. Sprenger teaches the plurality of tables include a user name and session ID storing table, a session status storing table, an initial session data storing table, a result storing table, an error message storing table, and a session log storing table (col. 4, lines 30-39, col. 14, lines 34-39, col. 14, lines 59-65, col. 17, lines 53-67, col. 18, lines 30-38, and col. 18, line 65 col. 19, line 4).

Application/Control Number: 09/930,160 Page 7

Art Unit: 2126

19. **As to claim 13**, Wess does not teach the business object includes a code including a command that provides instance of the business object with an attribute. Sprenger teaches the business object includes a code including a command which provides instance of the business object with an attribute (col. 15, lines 25-26).

- 20. As to claim 15, Wess as modified does not teach the business object includes a findByAttributes. Wess teaches the query/retrieve functionality based on the search criteria such as column name of the table that provided by the file uploaded from the remote computer (col. 12, lines 16-32). Sprenger teaches objects provide import/export functionalities (col. 5, lines 45-50). It would have been obvious to one of ordinary skill in the art adding any type of commands/functions to the object is just a choice of implementation.
- As to claim 16, Wess and Sprenger do not teach the findByAttributes supports object references in the file. However, Wess teaches sub-query is supported (col. 12, lines 26-32), and object reference is widely used in object and object-oriented programming language. It would have been obvious object reference is utilized in the system of Wess as modified by Sprenger.
- 22. **As to claim 17**, Wess as modified teaches the business object includes a code that receives a list of validated object attributes and returns a unique object identifier (col. 9, line 50 col. 10, line 36).

Application/Control Number: 09/930,160 Page 8

Art Unit: 2126

23. As to claim 18, Wess as modified teaches the business object includes a code for notifying an end of the data processing (col. 17, lines 5-10).

- 24. **As to claim 20**, Wess teaches the file uses a CSV (comma-separated values) format (col. 6, lines 25-28).
- 25. As to claim 21, Wess teaches the file is a text file including command lines, header lines, and data (col. 6, lines 25-28 and col. 6, line 59 col. 7, line 37).
- 26. As to claim 22, Wess does not teach the session is an export operation. Sprenger teaches the session is an export operation (col. 5, lines 45-50).
- 27. As to claim 23, Wess as modified teaches the business object exports all of its data or part of the data (col. 12, lines 16-32).
- 28. **As to claim 24**, Wess does not teach the business object calls an interface including a plurality of codes. Sprenger teaches the business object calls an interface including a plurality of codes (col. 7, lines 2-9).
- 29. As to claim 25, Wess does not teach the plurality of codes include a first code including a name of operation and a business object class name to be inserted into an output file. Sprenger

Art Unit: 2126

teaches the plurality of codes include a first code including a name of operation and a business object class name to be inserted into an output file (col. 7, lines 2-9 and col. 29, lines 50-51).

- 30. As to claim 26, Wess as modified does not teach the plurality of codes include onReceiveExport. Wess teaches the query/retrieve functionality based on the search criteria such as column name of the table that provided by the file uploaded from the remote computer (col. 12, lines 16-32). Sprenger teaches objects provide import/export functionalities (col. 5, lines 45-50). It would have been obvious to one of ordinary skill in the art adding any type of commands/functions to the object is just a choice of implementation.
- 31. **As to claim 27**, Wess as modified does not teach the onReceiveExport is a code for throwing an attribute set returned by the business object. However, Sprenger teaches an object for carry out the import/export functionality (col. 5, lines 45-50). It would have been obvious the object provides a method to return the result set to the user after finish processing the function.
- 32. As to claim 28, Wess teaches the utility is a deliverer of information (col. 12, lines 16-32).
- As to claim 29, Wess does not teach the data is changed without changing the business object. Sprenger teaches the data is changed without changing the business object (col. 16, lines 25-32).

Application/Control Number: 09/930,160 Page 10

Art Unit: 2126

34. As to claim 30, Wess teaches the utility includes a monitoring function, an error handling function, and reporting function (col. 8, line 43 – col. 9, line 13).

- As to claim 31, Wess teaches the utility receives information from another system (col. 6, lines 16-29). However, Wess does not teach load information to the business object. Sprenger teaches the utility receive data and command from the users (col. 28, lines 20-28), and processing the commands utilizing the objects (col. 4, lines 49-58 and col. 5, lines 40-50). It would have been obvious to one of ordinary skill in the art the objects in the system of Sprenger must have access to the data from another system in order to carry out the processing request.
- 36. As to claim 32, Wess does not teach the utility receives information from the business object and stores information on another system. Sprenger teaches the utility receives information from the business object and stores information on another system (col. 13, lines 11-21).

As to claim 33, Wess teaches

- providing a utility on a server for exporting and importing data to the network application (col. 1, lines 14-20 and processing system 115;col. 5, lines 56-67 and Fig. 1),
- associating a database with the utility (col. 6, lines 38-43, col. 9, lines 55-57),
- with the utility, receiving a selection of an import file, the import file comprising data in attext file and including a name of an object (col. 6, lines 1-5, lines 12-15, lines 25-29, lines 53-60, col. 13, lines 3-10 and Fig. 7),

Art Unit: 2126

with the utility, uploading the data and the object name from the selected import file (data and command from the remote system 116 ... processing system 115; col. 6, lines 16-29 and Fig. 7), wherein the uploaded data is stored in the utility database (When a data object instance ... by the functional components 106 and 108; col. 7, lines 38-44),

Page 11

However, Wess does not teach a business object (wherein the business object do the real 37. work such as performing tasks including adding, deleting or updating the data), operating the utility to invoke the business object associated with the business object name including delivering at least a portion of the uploaded data to the invoked business object, whereby the business object performs an operation on the delivered data, and updating the data in the utility database based on the performance of the operation by the invoked business object. Sprenger teaches a business object (col. 3, line 66 – col. 4, line 2, col. 5, lines 1-9, col. 5, lines 52-53, col. 20, lines 423-65), operating the utility to invoke the business object including delivery at least a portion of the data to the invoked business object (The second tier ... the objects; col. 3, line 66 – col. 4, line 2 and The object tier ... stored in the database; col. 4, lines 49-58), whereby the business object performs an operation of the data (col. 5, lines 1-15), and updating the data in the utility database based on the performance of the operation by the invoked business object (A row is inserted into Address 408 the first time a Customer row is added for a given address; col. 20, lines 55-65 and col. 29, lines 3-11). Although Sprenger does not teach the data is uploaded data, one of ordinary skill in the art could modify to utilizing the data from the uploaded data instead from the database.

Art Unit: 2126

38. It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teaching of Wess and Sprenger because it provides a method to manage data in the database using objects and can support a wide variety of hardware configurations, and easily scale up to meet added demands from the users.

Page 12

Response to Arguments

39. Applicant's arguments filed 11/30/2004 have been fully considered but they are not persuasive.

In the remarks, Applicant argued in substance that (1) the data object taught by Wess is not the same as "business object" as defined by the Applicants (page 8, lines 21-25), (2) Wess fails to teach selecting a file that has a business object name in the file, and (3) Wess fails to teach the business object being responsible for validating the data in the selected file.

Examiner respectfully traverses the above remarks:

As to the point (1), it has been clarified in the rejection of claim 1 to show that Wess teaches a data object that has associated processing commands, and Sprenger teaches the business object.

As to the point (2), Wess teaches the user can transmit and receive data from the processing system 115 (col. 6, lines 1-5), and the data transmit is in the form of file (see Fig. 7), wherein multiple object names are included (see Fig. 7). Therefore, the arguments are not persuasive.

As to the point (3), see 112 1st rejection above for examiner's position.

Art Unit: 2126

Conclusion

Page 13

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

41. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Diem K Cao whose telephone number is (571) 272-3760. The examiner can normally be reached on Monday - Friday, 8:00AM - 3:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Meng-Ai An can be reached on (571) 272-3756. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
